| Method      | ISO 1183-2            | ISO 1133-1            | ISO 37                            | ISO 37                               | IEC 60250  | IEC 60250   | NUC Method                    |  |  |
| unit        | kg/m <sup>3</sup>     | g/10min               | MPa                               | %                                    | -  | -   | %                             |  |  |
| Grade       |                       |                       |                                   |                                      |  |   |                               |  |  |
| DFDJ-4960IE | 922                   | 2.0                   | 13                                | 650                                  | 2.28   | 0.0001  | 50                            | Foamed Insulation for Telephone<br>Cable and CATV Cable Insulation | Provides very fine uniform isolated cells and a foamed insulation<br>with a little attenuation. Excellent extrudability. Rate of change of the<br>capacitance is small throughout the cable full length. |
| DGDJ-3485   | 950                   | 0.8                   | 10                                | 290                                  | 2.34   | 0.0003  | 40                            | Telephone Insulation/Foam Layer                                    | Provides extreamely thin thickness foamed insulation on a fine wire with high speed processing.<br>Excellent stable extruding and thermal stability.   |

1) Measured at base resin

2) Measured at 190°C, 21.18N

3) Molding condition: compression 2mm sheet, Test pieces: ISO 37 type 1A, Test speed: 500mm/min

4) The value at solid, Test method: Liquid replacement, 23°C

Note • The values are dependent upon using the testing method as indicated and are offered herein as a guide in the use of compound.
